Jira Integration

Easily track product requirements and customer commitments
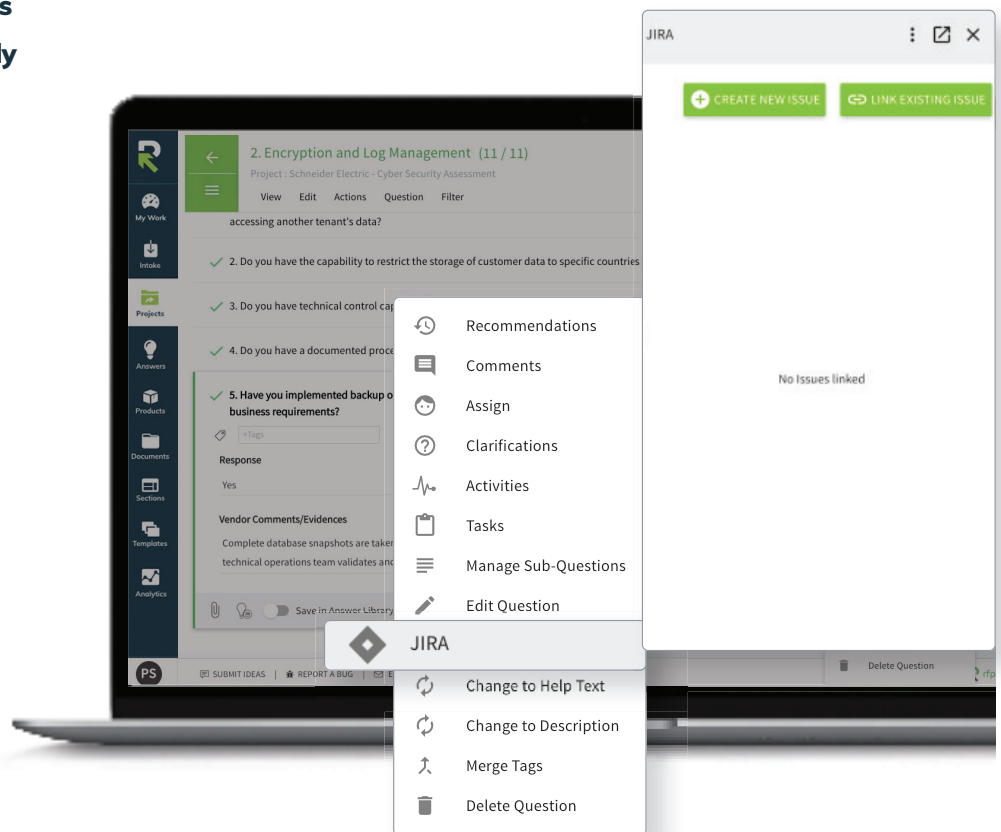

RFPIO

When your team is responding to RFPs and Security Questionnaires, you might come across required product updates. Commitments to customers that need to be fulfilled. And general insights that inform product and service demands. To make sure all necessary requirements are added to the product roadmap, pre-sales and product management must be in lock-step. Enter: RFPIO's Jira Integration. Now, proposal and product teams can better collaborate, share ideas, and track commitments in the project management tool where product teams are already rocking, Jira!

Fulfill customer obligations and feature requests

→ **Turn feature requests or ideas into Jira Tickets/Issues directly from an RFPIO Question, Section, or Project**

→ **Search for and link existing Jira Issues to RFPIO project requirements or notes**

→ **Assign owners, labels, deadlines, and priority levels directly from RFPIO**
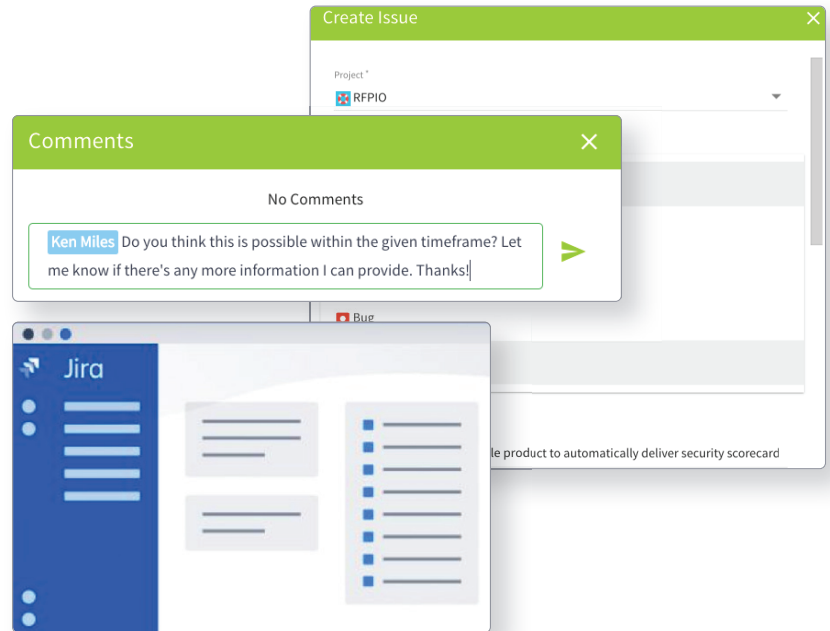

Jira Integration

Easily track product requirements and customer commitments

Improve collaboration between proposal, product, and presales teams

→ **@-mention any Jira users in RFPIO to start cross-functional discussions between platforms**

→ **Leverage multiple "Issue" types to collaborate on tasks, bugs, or stories**

→ **Enable automatic notifications to let ticket creators know anytime an associated ticket is updated or commented on**

Customize workflows, access management, and visibility

→ **Easily configure connections between multiple Jira and RFPIO Instances/ Business Units**

→ **Map custom fields between Jira and RFPIO to enhance reporting and streamline Ticket creation**

→ **Control where Jira Issues, ticket history, and related values are displayed within RFPIO Projects**
