

DATASHEET

Google Hangouts

Respond where your team is already working

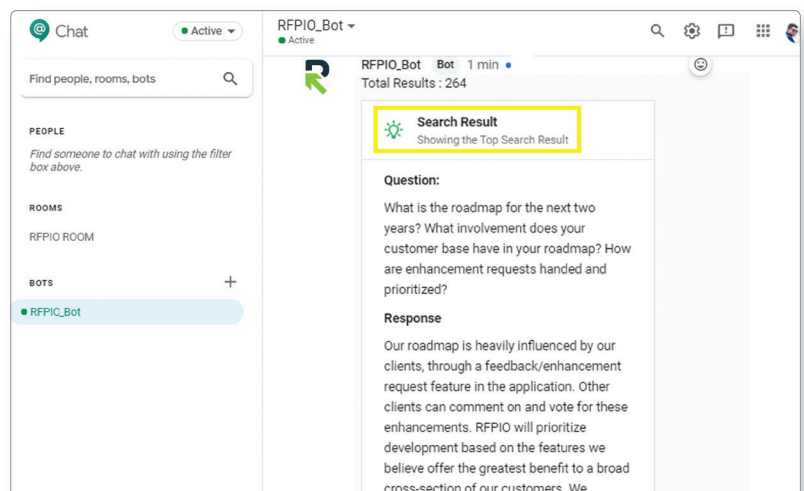

The foundation of a successful response management strategy is seamless communication at every stage of a project and access to historical proposal content whenever—and wherever—collaborators are working. Integrating RFPIO with Google Hangouts chats, proposal teams can respond to RFx and questionnaires more efficiently while simultaneously empowering other Hangouts users in the organization with on-demand access to RFPIO's answer library.

Collaborate on RFPIO projects without leaving Hangouts

RFPIO notifications, tasks, messages, and comments are conveniently delivered to key stakeholders and subject matter experts through Google Chat - who can view and respond to questions and engage with projects without ever needing to log into RFPIO.

- **@mention specific users or projects in RFPIO to message collaborators in a private chat or in group chat windows**
- **Deliver messages, comments, task reminders, and notifications through Google Chat with the RFPIO Chatbot.**

Turn Hangouts into an on-demand knowledge base

RFPIO's answer library is a rich database that contains the most up-to-date and accurate information about your organization. Whether individuals are responding to an RFP, support tickets, technical questions from partners, or queries from prospects, they'll most likely be able to find the answer they're looking for in the answer library.

- **Use @ commands in Google Chat to keyword search RFPIO for question-answer pairs**
- **Preview top search results in Google Chat windows or easily view all matching question-answer pairs in RFPIO**
- **Control Google Chat user access to answer library content according to factors such as user role and/or business unit**
